**Rubber, unvulcanized — Determinations  
using a shearing-disc viscometer —**

**Part 3:**

**Determination of the Delta Mooney value  
for non-pigmented, oil-extended,  
emulsion-polymerized SBR**

*Caoutchouc non vulcanisé — Déterminations utilisant un consistomètre  
à disque de cisaillement —*

*Partie 3: Détermination de la valeur Delta Mooney pour le caoutchouc  
styrène-butadiène en émulsion, étendu à l'huile, non pigmenté*

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 289-3 was prepared by ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 2, *Physical and degradation tests*.

ISO 289 consists of the following parts, under the general title *Rubber, unvulcanized — Determinations using a shearing-disc viscometer*:

- *Part 1: Determination of Mooney viscosity*
- *Part 2: Determination of pre-vulcanization characteristics*
- *Part 3: Determination of the Delta Mooney value for non-pigmented, oil-extended, emulsion-polymerized SBR*
