Pulps — Determination of manganese content — Sodium periodate photometric and flame atomic absorption spectrometric methods

Pâtes — Détermination de la teneur en manganèse — Méthode photométrique au périodate de sodium et méthode par spectrométrie d'absorption atomique de flamme

First edition — 1982-08-15

UDC 676.1 : 543.42/.43 : 546.711

Ref. No. ISO 1830-1982 (E)

Descriptors : pulps, tests, determination of content, manganese, colorimetric analysis, atomic absorption spectroscopic analysis.

Price based on 4 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 1830 was developed by Technical Committee ISO/TC 6, *Paper, board and pulps*, and was circulated to the member bodies in March 1981.

It has been approved by the member bodies of the following countries :

Australia	Hungary	Romania
Austria	India	South Africa, Rep. of
Belgium	Iran	Spain
Brazil	Italy	Sweden
Canada	Kenya	Switzerland
China	Korea, Dem. P. Rep. of	Turkey
Czechoslovakia	Korea, Rep. of	United Kingdom
Egypt, Arab Rep. of	Netherlands	USA
Finland	New Zealand	USSR
France	Norway	Venezuela
Germany, F. R.	Poland	

No member body expressed disapproval of the document.

This International Standard cancels and replaces ISO Recommendation R 1830-1970, of which it constitutes a technical revision.
