Figure 2

The definition of s in the key to the figure should be:

“s = splintering break: unstable cracking followed by splintering;”

Page 7

Subclause 5.1.6

In note 1, the first line should read: “... requires a pendulum mass to foundation mass ratio of 40:1 ...”.

ISO 179-2:1997(E)**Foreword**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 179-2 was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 2, *Mechanical properties*.

ISO 179 consists of the following parts, under the general title *Plastics — Determination of Charpy impact properties*:

- *Part 1: Non-instrumented impact test*
- *Part 2: Instrumented impact test*

Annexes A to C of this part of ISO 179 are for information only.
