

Designation: F2011 – 02 (Reapproved 2018)

Standard Specification for Safety and Performance of Fun-Karts¹

This standard is issued under the fixed designation F2011; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification relates to the safety performance specifications for commercially manufactured fun-karts intended for private use, on suitable off-road terrain, by consumers.

1.2 This specification is intended to reduce hazards, other than those inherent in the sport of fun-karting, to the users of fun-karts during normal intended use by specifying performance standards of manufacturing.

1.3 This specification applies to fun-karts for private use and does not apply to concession, race, home-made, consumer-modified fun-karts, fun-karts that are pedal-powered, unpowered fun-karts, or fun-karts, which are used for commercial purposes.

1.4 This specification recognizes that there are operational hazards relating to fun-karts, which operators and passengers are deemed to have accepted by their use and operation of the fun-kart including, but not limited to, falling out, running into, through, under or over objects, upsetting the fun-kart, general operator recklessness, pinches, scratches, or bruises, or a combination thereof.

1.5 This specification does not cover labeling, maintenance, or use. For use and maintenance, see Safety Guide F1928.

1.6 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.7 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

¹ This specification is under the jurisdiction of ASTM Committee F15 on Consumer Products and is the direct responsibility of Subcommittee F15.41 on Fun Karts.

Current edition approved Feb. 1, 2018. Published February 2018. Originally approved in 2000. Last previous edition approved in 2010 as F2011 – 02 (2010). DOI: 10.1520/F2011-02R18.

3. Terminology

3.1 *Definitions of Terms Specific to This Standard:*

3.1.1 *axle guard, n*—a device that covers the drive axle on fun-karts so that the possibility of injury resulting from hand, hair, loose clothing, or body parts contacting the axle is reduced.

3.1.2 *brush bars, n*—any device supplied by the manufacturer intended to deflect loose vegetation from the path of the fun-kart operator, and passenger in two-seat fun-karts.

3.1.3 *control pedal pivot, n*—the center point about which the control pedal rotates. Excluded from this definition are any control device(s) attached to the pedal itself.

3.1.4 *deck plates, n*—a form of guarding through the use of relatively flat barriers to cover rotating components.

3.1.5 *engine stop switch, n*—a toggle switch, or other two-position positively engaging switch, which when activated causes the engine to stop or not operate, or both.

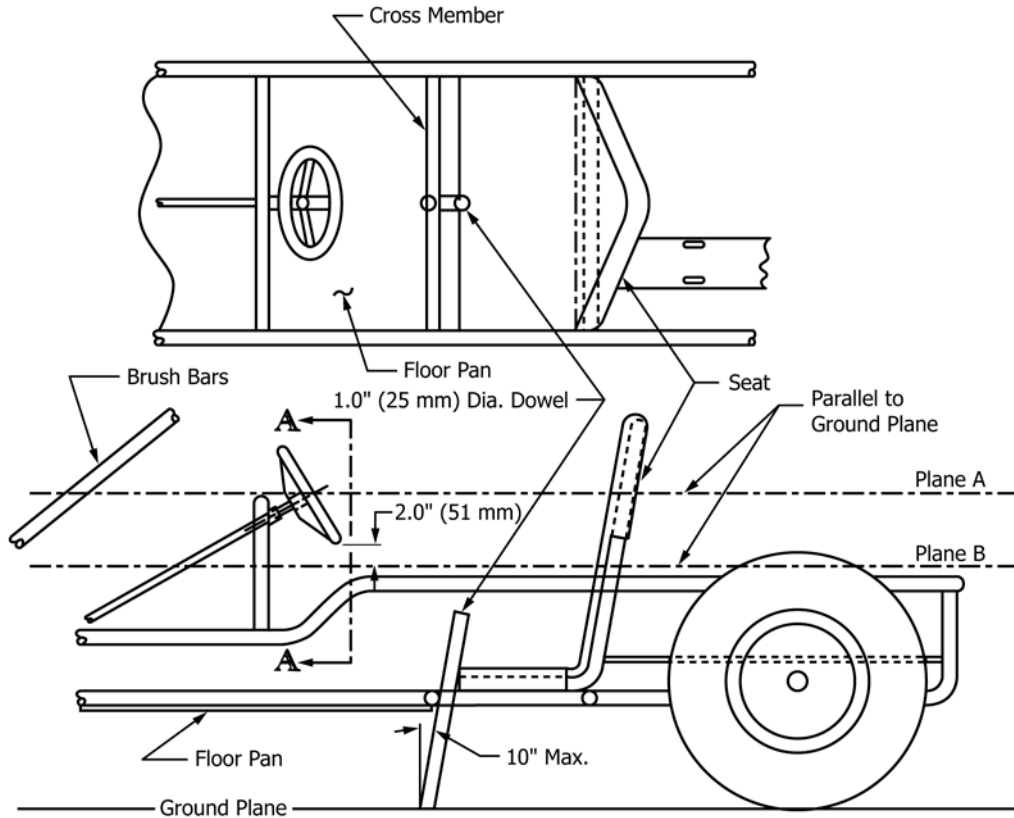

FIG. 1 Diagram of Fun-Kart Frame

3.1.6 *engine throttle system, n*—the throttle mechanism attached to the engine, as provided by the engine manufacturer.

3.1.7 *fun-kart, n*—a motorized vehicle with four wheels, excluding vehicles which the operator, and passenger, if any, sit astride, sold commercially as consumer goods and intended for private personal recreational use by consumers for off-road use on suitable terrain, as recommended by the manufacturer, at maximum speeds over 12 mph (19.3 km/h) but not exceeding 40 mph (64.4 km/h).

3.1.8 *fun-kart accelerator system, n*—the mechanical system, that is, accelerator pedal, actuation rod or linkage, which is separate from the engine throttle system, and which is used to control the throttle position of the fun-kart engine.

3.1.9 *locking fastener, n*—includes prevailing torque locknuts, cotter pins, serrated surface lock nuts, pal nuts, safety wire and similar hardware intended to prevent unintended loosening when properly used.

3.1.10 *normally-seated position, n*—see Safety Guide F1928 for specifics.

3.1.11 *over center, n*—a condition where the steering linkages bind when the pitman arm is allowed to travel beyond its normal range of motion.

3.1.12 *pan, n*—the barrier surface extending forward from in front of the seat to where the operator/passengers rest their feet.

3.1.13 *pitman arm, n*—the link between the steering column and the tie rod(s).

3.1.14 *throttle stop, n*—a device used to limit the travel of the accelerator system.

3.1.15 *two-seat fun-kart, n*—a fun-kart with designed seating to accommodate one operator and one passenger.

4. Fun-Kart Frame

4.1 Each fun-kart shall be equipped with a floor pan with the following characteristics:

4.1.1 The back-edge of the pan shall extend to a point that a 1 in. (25 mm) dowel rod between the back of the pan and the front of the seat bottom or its attachment point, with the seat in a full backward position, shall be a maximum of 90° off of vertical (see Fig. 1).

4.1.2 The front-edge of the pan shall extend, at a minimum, to a point in front of the operator's heel position, with the operator normally seated and able to operate the foot pedal controls.

4.1.3 The pan shall be solid and uninterrupted (comprised of one or more pieces).

4.1.4 The width of the pan (see Fig. 2) shall include any frame rails to which it is mounted, provided there is no vertical gap between the edge of the pan and the frame rails.

4.1.5 The seat shall be centered laterally over the pan.

4.1.6 The pan on single-seat fun-karts must be at least 14 in. (356 mm) wide at its rear-edge.

4.1.7 The pan on two-seat fun-karts must be at least 20 in. (508 mm) wide at its rear-edge.

4.2 *Seating:*

FIG. 2 Floor Pan Width Measurement

4.2.1 Fun-karts shall be equipped with a rigid device, along the outer edges of the fun-kart, either integral with the seat itself or located in the frame of the fun-kart, to help maintain the operator's/passenger's position in the seat about a lateral axis of the fun-kart. This device shall extend, at a minimum, the full depth of the base of the seat. On fun-karts equipped with adjustable seats, the device shall extend throughout all seat positions or be mounted to the seat itself.

4.2.2 The seat shall not extend more than 3-½ in. (90 mm) per side over the pan.

4.2.3 On two-seat fun-karts, the steering wheel center shall be located within 3 in. (76 mm) of the center line of the seating position of the fun-kart's operator, when seated in a normal operating position.

4.3 *Steering Support Columns:*

4.3.1 On fun-karts equipped with steering column support of less than 4 in. (102 mm) of width, measured at a point 2 in. (51 mm) below lower edge of the steering wheel, the steering wheel support shall be padded.

4.3.2 No support column shall have a stop switch or other device projecting from the surface facing the operator, unless it is at or above a horizontal parallel plane measured at a point 2 in. (51 mm) below the lower edge of the steering wheel.

4.4 Sharp edge test (Reserved).

4.5 Fun-kart steering mechanisms shall be designed, such that the mechanism cannot go into an "over center" condition.

4.6 The rear of fun-karts shall be designed to prevent any contact with the fuel tank, carburetor, or battery should the kart be backed straight into a vertical wall at a speed of 2 mph (3.2 km/h).

4.7 A front bumper assembly, or the fun-kart frame itself, shall extend in front of the steering tie rods.

5. **Fun-Kart Controls**

5.1 Fun-karts, or their control pedals, or both, when properly used, shall be designed to help retain the operator's feet inside the kart.

5.2 Each control pedal pivot shall be of such a design that over-tightening the fastening mechanism will not result in binding of the pivot.

5.3 In two-seat fun-karts, the kart shall be equipped with devices that are designed, when properly used, to help keep the passenger's feet:

5.3.1 Clear of the fun-kart's steering mechanism and control pedals, and

5.3.2 Inside the fun-kart.

5.4 *Control Pedal Positions:*

5.4.1 On fun-karts equipped with pedal controls, the controls shall be located as follows:

5.4.1.1 The accelerator pedal shall be to the right of the operator's seated position and operated by the right foot.

5.4.1.2 The brake pedal shall be to the left of the operator's seated position and operated by the left foot.

5.4.1.3 Any other configuration of accelerator and brake location shall be labeled clearly and plainly.

5.4.2 With the seat in its full-forward position, there shall be no less than 28 in. (711 mm) between the forward position of the seat back to the pedals at their fully engaged position.

5.4.3 In two-seat fun-karts, any control pedal located in the middle of the kart shall be located within 3 in. (76 mm) of the center line of the kart.

5.5 There shall be a remote engine stop switch, with the operating characteristics specified in 3.1.5, located on the steering wheel or steering column, as directed in 4.3.2, and easily accessible by the operator.

5.6 *Fun-Kart Accelerator System:*

5.6.1 There shall be a return spring attached to the accelerator's actuating mechanism, that is, accelerator pedal, actuation rod or linkage.

5.6.2 There shall be a stop to limit the travel of the accelerator actuation mechanism. This stop must be external of the engine and its throttle mechanism.

5.7 The attachment point of the steering tie rod to the pitman arm shall be no lower than at the center line of the front axle assembly, unless appropriately guarded to help prevent damage to the steering mechanism from contact with the ground.

6. **Tire Capacity**

6.1 In specifying tires for use on fun-karts, manufacturers shall specify a tire that has a load bearing capacity, at a minimum, of the maximum gross vehicle weight of the fun-kart divided by four.

7. **Paint**

7.1 Paint on fun-karts shall comply with the lead content provisions of 16 CFR 1303.

8. **Electrical**

8.1 On fun-karts equipped with batteries, or electrical systems, or both:

8.1.1 The battery compartment shall be marked permanently to show the correct battery orientation, polarity, voltage, and size.
