

Assessment of inadvertent ignition of flammable atmospheres by radio-frequency radiation — Guide

ICS 13.280

Committees responsible for this British Standard

The preparation of this British Standard was entrusted to Technical Committee GEL/602, upon which the following bodies were represented:

BBC — British Broadcasting Corporation
BEAMA Ltd. — GAMBICA
Chamber of Shipping
Engineering Equipment and Materials Users Association
ERA Technology Ltd
HSE — Health and Safety Executive
Institute of Petroleum
Institution of Gas Engineers
Ministry of Defence — UK Defence Standardization
Radio Society of Great Britain
SIRA Limited
UK Offshore Operators Association Limited
Co-opted member

This British Standard, having been prepared under the direction of the Electrotechnical Sector Policy and Strategy Committee, was published under the authority of the Standards Policy and Strategy Committee on 30 October 2002

© BSI 30 October 2002

First published February 1986
First revision November 1991
Second revision October 2002

The following BSI references relate to the work on this British Standard:

Foreword	iii
<hr/>	
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Symbols and abbreviations	3
5 General considerations	4
6 Transmitters and transmitter output parameters	5
7 Structures and spark-making mechanisms	7
8 Ignition of flammable atmospheres	11
9 Practical measurements and tests	13
10 Methods of assessment for determining potential RF ignition hazards on a plant containing hazardous areas	15
11 Plant safety measures	43
12 Special cases	45
<hr/>	
Annex A (informative) Sources of information and addresses of some advisory bodies	51
Annex B (informative) Electromagnetic radiated fields and examples of radiating antenna and unintended receiving antenna characteristics	52
Annex C (informative) Subdivision of group II flammable gases and vapours	60
Annex D (normative) Measurement of electromagnetic fields	65
Annex E (normative) Methods of measurement on structures (on-site tests)	67
Annex F (informative) Derivation of vulnerable zone distances for Table 5, Table 6 and Table 10	72
Annex G (informative) Worked examples of full assessment procedure	73
Annex H (informative) Ground-wave propagation (vertical polarization) — Calculation of field strength	81
<hr/>	
Bibliography	84
<hr/>	
Figure 1 — Typical loop-type structures	9
Figure 2 — Assessment procedure flow chart	17
Figure 3 — On-site test procedure flow chart [see 10.5 and 10.1b)]	18
Figure 4 — Safe threshold field strength versus frequency for single unmodulated transmissions	26
Figure 5 — Field strength versus distance from the transmitter (land path)	33
Figure 6 — Field strength versus distance from the transmitter (sea path)	34
Figure 7 — Modulus match powers for $Q_k = 5$	39
Figure 8 — Example of reduction of structure efficiency	44
Figure B.1 — Typical antenna installations (physical characteristics of transmitting antennas)	54
Figure B.2 — Definition of angles	57
Figure E.1 — Test arrangements for measurement of extractable power	69
Figure E.2 — Test arrangement for incendivity tests	72
Figure G.1 — Modulus match powers for structure resonated at 1,1 MHz	78
