**ASME B94.52M-1999**  
(Revision of ASME B94.52M-1994)

Date of Issuance: January 28, 2000

This Standard will be revised when the Society approves the issuance of a new edition. There will be no addenda or written interpretations of the requirements of this Standard issued to this edition.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not "approve," "rate," or "endorse" any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,  
in an electronic retrieval system or otherwise,  
without the prior written permission of the publisher.

## **FOREWORD**

The first Simplified Practice Recommendation to cover hacksaws was issued by the Department of Commerce in 1928, in cooperation with the hacksaw industry. The changing requirements of the marketplace were met by six subsequent revisions, the last revision being in 1962.

In 1962, recognizing the interest of European industry in promoting an international standard, the United States hacksaw industry began to work toward the approval of its standard under the Institute's existing standards method of procedure. The existing standard, ANSI B121.1-1970, was the result of this work.

As a result of work in the 1970s in the area of international standards, the Hack and Band Saw Manufacturers Association of America, which is a member of the committee for the promulgation of the standard (ISO TC29 WG), felt that additional information should be available to manufacturers, distributors, and users that would enable them to produce, sell, and utilize better hacksaw blades.

Added sections included:

- (a) suggested composition guidelines for standard, composite, alloy, and high-speed steel hacksaws;
- (b) hardness limits;
- (c) tooth form suggestions;
- (d) tooth form set tolerances;
- (e) flatness tolerances.

The present standard is a result of submittals by the hacksaw industry to the ASME Standards Committee B94. This Committee achieves consensus of the standards by means of a Subcommittee which develops standards under procedures accepted by the American National Standards Institute.

The American Society of Mechanical Engineers is the sponsor for B94 and supervises the promulgation of the standard with the expertise furnished by individual members. This Standard was designated B94.52M and was approved as an American National Standard on April 14, 1999.
