Designation: D1187/D1187M - 97 (Reapproved 2018)

Standard Specification for Asphalt-Base Emulsions for Use as Protective Coatings for Metal¹

This standard is issued under the fixed designation D1187/D1187M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

- 1.1 This specification covers emulsified asphalt suitable for application in a relatively thick film as a protective coating for metal surfaces.
- 1.2 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.
- 1.3 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

2. Referenced Documents

2.1 ASTM Standards:²

C150/C150M Specification for Portland Cement
D2939 Test Methods for Emulsified Bitumens Used as
Protective Coatings (Withdrawn 2012)³

3. Classification

- 3.1 *Type I*—Quick-setting emulsified asphalt suitable for continuous exposure to water within a few days after application and drying.
- 3.2 *Type II*—Emulsified asphalt suitable for continuous exposure to the weather, only after application and drying.

4. Materials and Manufacture

4.1 Emulsified asphalt used as a protective coating for metal shall consist of asphalt, water, and emulsifying agents.

5. Composition

5.1 Emulsified asphalt complying with this specification shall conform to the requirements in Table 1.

6. Performance Requirements

- 6.1 *Uniformity*—The emulsion shall be homogeneous. After a thoroughly stirred sample has been held at 10°C [50°F] in a closed container for 48 h, there shall be no separation of water, coagulation of the asphalt base, settling, or packing in the container that cannot be overcome by moderate hand stirring.
- 6.2 Consistency—The emulsion shall be of a consistency that will spread readily and permit application by brush, mop, or trowel at the rate of 1.0 L/m² [2.5 gal U.S./100 ft²] to vertical metal surfaces at ambient temperatures above 10°C [50°F]. See Section 17 of Test Methods D2939.
- 6.3 Stability—There shall be no coagulation during the cement addition or at the conclusion of the 1-min mixing period.
- 6.4 The emulsion shall conform to the additional requirements prescribed in Table 2.

7. Sampling and Test Methods

- 7.1 Sample the material, and determine the properties enumerated in this specification in accordance with Test Methods D2939, except for stability and flexibility.
 - 7.2 Stability:
- 7.2.1 *Material*—High-early-strength portland cement conforming to the requirements for Type III of Specification C150/C150M, and having a minimum specific surface area of 1900 cm²/g [133 556 in.²/lb].
 - 7.2.2 Procedure:
- 7.2.2.1 Place about 200 g of emulsion in a tared 500-mL round-bottom porcelain dish, and weigh.
- 7.2.2.2 Add 25 mass % portland cement based on the weight of the emulsion, in small portions while stirring constantly with a stiff spatula.

¹ This specification is under the jurisdiction of ASTM Committee D08 on Roofing and Waterproofing and is under the direct responsibility of Subcommittee D08.09 on Bituminous Emulsions.

Current edition approved July 1, 2018. Published July 2018. Originally published in 1956. Last previous edition approved in 2011 as D1187/D1187M – 97 (2011) $^{\epsilon 1}$. DOI: 10.1520/D1187_D1187M-97R18.
