Electrode taper fits for spot welding equipment — Dimensions

Emmanchements coniques d'électrodes pour machines à souder par points — Dimensions

First edition — 1980-03-15

UDC 621.791.763.1.039

Ref. No. ISO 1089-1980 (E)

Descriptors : welding electrodes, resistance welding electrodes, spot welding, spigot and socket joints, taper, dimensions, dimensional tolerances.

Price based on 3 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 1089 was developed by Technical Committee ISO/TC 44, *Welding and allied processes*, and was circulated to the member bodies in July 1978.

It has been approved by the member bodies of the following countries :

Belgium	Ireland	Poland
Brazil	Israel	Romania
Bulgaria	Italy	Spain
Canada	Japan	Switzerland
Egypt, Arab Rep. of	Korea, Rep. of	United Kingdom
France	Mexico	USSR
Germany, F. R.	New Zealand	
India	Norway	

The member bodies of the following countries expressed disapproval of the document on technical grounds :

Czechoslovakia
Sweden

This International Standard cancels and replaces ISO Recommendation R 1089-1969, of which it constitutes a technical revision.
