

W-75-30

Paraformaldehyde for industrial use — Methods of test — Determination of aldehyde content — Titrimetric method

Paraformaldéhyde à usage industriel — Méthodes d'essai — Dosage de l'aldéhyde — Méthode titrimétrique

First edition — 1981-05-15

UDC 661.727.1 : 543.24

Ref. No. ISO 1391/5-1981 (E)

Descriptors : industrial products, paraformaldehyde, chemical analysis, determination of content, aldehydes, titration.

Price based on 2 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 1391/5 was developed by Technical Committee ISO/TC 47, *Chemistry*, and was circulated to the member bodies in January 1980.

It has been approved by the member bodies of the following countries :

Australia	France	Philippines
Austria	Germany, F. R.	Poland
Belgium	Hungary	Romania
Brazil	India	South Africa, Rep. of
Bulgaria	Italy	Switzerland
China	Korea, Rep. of	Thailand
Czechoslovakia	Mexico	United Kingdom
Egypt, Arab Rep. of	Netherlands	USSR

No member body expressed disapproval of the document.

This International Standard has also been approved by the International Union of Pure and Applied Chemistry (IUPAC).
