Aluminium and aluminium alloys — Determination of chromium content — Flame atomic absorption spectrometric method

Aluminium et alliages d'aluminium — Dosage du chrome — Méthode par spectrométrie d'absorption atomique dans la flamme

First edition — 1981-12-01

UDC 669.71 : 543.422 : 546.76

Ref. No. ISO 4193-1981 (E)

Descriptors : aluminium, aluminium alloys, chemical analysis, determination of content, chromium, atomic absorption spectroscopic method.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4193 was developed by Technical Committee ISO/TC 79, *Light metals and their alloys*, and was circulated to the member bodies in December 1980.

It has been approved by the member bodies of the following countries :

Australia	Germany, F. R.	Romania
Austria	Hungary	South Africa, Rep. of
Brazil	India	Spain
Canada	Italy	Sweden
China	Japan	Switzerland
Czechoslovakia	Korea, Rep. of	United Kingdom
Egypt, Arab Rep. of	Norway	USA
France	Poland	USSR

The member body of the following country expressed disapproval of the document on technical grounds :

Netherlands
