

INTERNATIONAL  
STANDARD

ISO  
4362

Second edition  
1999-09-01

---

**Hydrometric determinations — Flow  
measurement in open channels using  
structures — Trapezoidal broad-crested weirs**

*Déterminations hydrométriques — Mesure de débit dans les canaux  
découverts au moyen de structures — Déversoirs trapézoïdaux à seuil  
épais*

Reference number  
ISO 4362:1999(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4362 was prepared by Technical Committee ISO/TC 113, *Hydrometric determinations*, Subcommittee SC 2, *Notches, weirs and flumes*.

This second edition cancels and replaces the first edition (ISO 4362:1992), which has been extended to include the use of the weir in trapezoidal channels in addition to its use in rectangular channels.
