## Light olefins for industrial use — Determination of hydrocarbon impurities by gas chromatography — General considerations

*Oléfines légères à usage industriel — Dosage des impuretés hydrocarbonées par chromatographie en phase gazeuse — Considérations générales*

First edition — 1981-10-01

UDC 661.715.3 : 543.544

Ref. No. ISO 6377-1981 (E)

**Descriptors :** olefinic hydrocarbons, chemical analysis, determination of content, impurities, ethylene, propylene, butadienes, gas chromatography, apparatus, sampling, calibrating, generalities.

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 6377 was developed by Technical Committee ISO/TC 47, *Chemistry*, and was circulated to the member bodies in October 1979.

It has been approved by the member bodies of the following countries :

Australia	Hungary	Poland
Austria	India	Portugal
Belgium	Italy	Romania
Czechoslovakia	Korea, Rep. of	South Africa, Rep. of
France	Mexico	Thailand
Germany, F. R.	Netherlands	USSR

The member body of the following country expressed disapproval of the document on technical grounds :

Switzerland
