## Carbonaceous materials for the production of aluminium — Pitch for electrodes — Determination of content of quinoline-insoluble material

*Produits carbonés utilisés pour la production de l'aluminium — Brais pour électrodes — Détermination du taux de matières insolubles dans la quinoléine*

First edition — 1981-11-01

UDC 665.777.43 : 669.713.7 : 543.21

Ref. No. ISO 6791-1981 (E)

Descriptors : extraction metallurgy, electrodes, aluminium, pitch (materials), chemical analysis, determination of content, gravimetric analysis, insoluble matter.

Price based on 3 pages

ISO 6791-1981 (E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 6791 was developed by Technical Committee ISO/TC 47, *Chemistry*, and was circulated to the member bodies in December 1979.

It has been approved by the member bodies of the following countries :

Australia	Egypt, Arab Rep. of	Romania
Austria	France	South Africa, Rep. of
Belgium	Germany, F. R.	Sweden
Brazil	Hungary	Switzerland
Bulgaria	Italy	Thailand
Canada	Korea, Rep. of	United Kingdom
China	Poland	USSR
Czechoslovakia	Portugal	

The member body of the following country expressed disapproval of the document on technical grounds :

Netherlands

This International Standard has also been approved by the International Union of Pure and Applied Chemistry (IUPAC).
