

INTERNATIONAL
STANDARD

ISO
11342

Second edition
1998-04-15

**Mechanical vibration — Methods and
criteria for the mechanical balancing of
flexible rotors**

*Vibrations mécaniques — Méthodes et critères pour l'équilibrage
mécanique des rotors flexibles*

Reference number
ISO 11342:1998(E)

Contents		Page
1	Scope	1
2	Normative references	1
3	Definitions	2
4	Fundamentals of flexible rotor dynamics and balancing	2
5	Rotor configurations	6
6	Procedures for balancing flexible rotors at low speed	9
7	Procedures for balancing flexible rotors at high speed	12
8	Evaluation criteria	17
9	Evaluation procedures	22

Annexes

A	(informative) Cautionary notes concerning rotors on site	26
B	(informative) Optimum planes balancing — Low-speed three-plane balancing	27
C	(informative) Conversion factors	29
D	(informative) Calculation of equivalent mode residual unbalance	30
E	(informative) Procedure to determine if a rotor is rigid or flexible	33
F	(informative) Example — Permissible equivalent modal unbalance calculations	35
G	(informative) A method of computation of unbalance correction	36
H	(informative) Definitions from ISO 1925:1990 and ISO 1925:1990/Amd 1:1995 relating to flexible rotors	37
I	(informative) Bibliography	39

Tables

1	Flexible rotors	7
2	Balancing procedures	9
C.1	Suggested conversion factor ranges	29

Figures

1	Simplified mode shapes for flexible rotors on flexible supports	3
2	Examples of possible damped mode shapes	4
B.1	Graphical presentation for determination of H	28
D.1	Turbine rotor	30
D.2	Run-up curve — Before balancing	31
G.1	Vectorial effect of a trial mass set	36

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11342 was prepared by technical committee ISO/TC 108, *Mechanical vibration and shock*, Subcommittee SC 1, *Balancing, including balancing machines*.

This second edition cancels and replaces the first edition (ISO 11342:1994), of which it constitutes a technical revision.

Annexes A to I of this International Standard are for information only.
