
**Ships and marine technology — Risk
assessment on anti-fouling systems on
ships —**

**Part 1:
Marine environmental risk assessment
method of biocidally active substances
used for anti-fouling systems on ships**

*Navires et technologie maritime — Évaluation des risques pour les
systèmes antisalissure sur les navires —*

*Partie 1: Méthode d'évaluation des risques environnementaux
maritimes des substances actives biocides utilisées pour les systèmes
antisalissure sur les navires*

Foreword	iv
Introduction	v
1 Scope	1
2 Terms and definitions	1
3 Application	4
3.1 General	4
3.2 Application considerations	4
4 Structure and procedure of environmental risk assessment	5
5 Exposure assessment	5
5.1 Selection of representative product	5
5.2 Quantification of release rate	6
5.3 Preparing the emission scenario	6
5.4 Determination of PEC	8
6 Hazard assessment	8
6.1 Setting of PNEC	8
6.2 Consideration of assessment factors	10
6.3 Determination of PNEC used for risk characterization	10
7 Risk characterization	11
7.1 General	11
7.2 Data and information	11
7.3 Assessment results	12
7.4 Additional information obtained after last risk characterization	13
8 Risk assessment report	13
Annex A (informative) Systems for estimation of release rates of biocidally active substances from anti-fouling paints	14
Annex B (normative) Details of risk characterization process of an environmental risk assessment for organic biocidally active substances used in anti-fouling systems on ships	17
Annex C (normative) Issues to be considered for risk characterization for inorganic biocidally active substances used in anti-fouling systems on ships	24
Annex D (informative) Examples of guidance for determining data quality	28
Annex E (informative) Examples of testing methods	29
Annex F (informative) Setting of assessment factors (AF)	34
Annex G (normative) Minimum information required for the risk assessment report	40
Annex H (informative) Previously validated models for predicting environmental concentrations	44
Bibliography	46
