
**Nanotechnologies — Size distribution
and concentration of inorganic
nanoparticles in aqueous media via
single particle inductively coupled
plasma mass spectrometry**

*Nanotechnologies - Distribution de taille et concentration de
nanoparticules inorganiques en milieu aqueux par spectrométrie de
masse à plasma induit en mode particule unique*

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Abbreviated terms	2
5 Conformance	2
6 Procedure	3
6.1 Principle.....	3
6.2 Apparatus and equipment.....	3
6.3 Chemicals, reference materials and reagents.....	3
6.3.1 Chemicals.....	3
6.3.2 Reference materials.....	3
6.3.3 Reagents.....	4
6.4 Samples.....	4
6.4.1 Amount of sample.....	4
6.4.2 Sample dilution.....	5
6.5 Instrumental settings and performance check.....	5
6.5.1 Settings of the ICP-MS system.....	5
6.5.2 Checking the performance of the ICP-MS system.....	5
6.6 Determination of the transport efficiency.....	6
6.6.1 Determination of transport efficiency based on measured particle frequency.....	6
6.6.2 Determination of transport efficiency based on measured particle size.....	7
6.7 Determination of the linearity of response.....	8
6.8 Determination of the blank level.....	8
6.9 Analysis of aqueous suspension.....	8
6.10 Data conversion.....	9
7 Results	9
7.1 Calculations.....	9
7.1.1 Calculation of the transport efficiency.....	10
7.1.2 Calculation of the ICP-MS response.....	10
7.1.3 Calculation of particle concentration and size.....	10
7.1.4 Calculation of the particle concentration detection limit.....	11
7.1.5 Calculation of the particle size detection limit.....	12
7.1.6 Calculation of ionic concentration.....	13
7.2 Performance criteria.....	13
7.2.1 Transport efficiency.....	13
7.2.2 Linearity of the calibration curve.....	13
7.2.3 Blank samples.....	13
7.2.4 Number of detected particles.....	13
8 Test report	13
Annex A (informative) Calculation spreadsheet	15
Bibliography	19
