## Essential oils — Determination of carbonyl value — Free hydroxylamine method

*Huiles essentielles — Détermination de l'indice de carbonyle — Méthode à l'hydroxylamine libre*

**Second edition — 1983-12-01**

Corrected and reprinted — 1985-08-01

---

UDC 668.5 : 547.28 : 543.86

Ref. No. ISO 1271-1983 (E)

Descriptors : essential oils, chemical analysis, determination of content, carbonyl compounds.

Price based on 4 pages

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 1271 was prepared by Technical Committee ISO/TC 54. *Essential oils*.

International Standard ISO 1271 was first published in 1972. This second edition cancels and replaces the first edition, of which it constitutes a technical revision.
