Earth-moving machinery — Dimensions of fuel filler opening

Engins de terrassement — Dimensions de l'orifice de remplissage du fuel

Second edition — 1985-08-15

UDC 624.132.3 : 621.879

Ref. No. ISO 3541-1985 (E)

Descriptors : earth moving equipment, refuelling, filling devices, orifices, dimensions.

Price based on 4 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 3541 was prepared by Technical Committee ISO/TC 127, *Earth-moving machinery*.

ISO 3541 was first published in 1975. This second edition cancels and replaces the first edition, of which it constitutes a technical revision.
