

Residual Stress Measurement by X-Ray Diffraction — SAE J784a

Report of Iron and Steel Technical Committee approved
September 1960 and last revised by Fatigue Design and
Evaluation Committee August 1971.

SAE Information Report
First edition published September 1960
Second printing January 1964
Second edition published August 1971

SAE Technical Board Rules and Regulations

All technical reports, including standards approved and practices recommended, are advisory only. Their use by anyone engaged in industry or trade is entirely voluntary. There is no agreement to adhere to any SAE Standard or SAE Recommended Practice, and no commitment to conform to or be guided by any technical report.

In formulating and approving technical reports, the Technical Board, its Councils and Committees will not investigate or consider patents which may apply to the subject matter. Prospective users of the report are responsible for protecting themselves against liability for infringement of patents.

TABLE OF CONTENTS

PART A - Principles and Methods of Analysis	1
SECTION 1 - Residual Stresses: Types and Sources	3
1.1 Introduction	3
1.2 Sources of Residual Stresses	3
1.2.1 Mechanical Processes	4
1.2.2 Thermal Processes	5
1.2.3 Chemical Processes	10
1.2.4 Combination Processes	10
1.3 References	11
SECTION 2 - Principles of Residual Stress Measurements	12
2.1 Elemental Stress Relationships	12
2.2 Stress-Strain Relations	12
2.3 Relation of Strain Equation to X-Ray Stress Analysis	13
2.4 Stress Equation as Function of Diffraction Angle	15
2.5 Stress Equation as Function of $\sin^2\psi$	16
SECTION 3 - Equipment and Methods of Analysis	17
3.1 Introduction	17
3.2 Description of Diffractometer Equipment and Methods	17
3.3 Diffractometer Residual Stress Techniques	19
3.3.1 Two-Exposure Technique	19
3.3.2 Multi-Exposure or $\sin^2\psi$ Technique	20
3.4 Film Techniques	20
3.5 Portable Diffractometer Technique	24
3.6 Parallel Beam Diffractometer Technique	24
SECTION 4 - Selection of Radiation, Reflections, and Filters	26
4.1 Radiation and Peak Combinations	26
4.2 Filter Criteria	26
4.3 References	28
SECTION 5 - Specimen Preparation	29
5.1 Effect of Surface Conditions	29
5.2 Material Removal	29
5.3 Factors Affecting Minimum Specimen Size	31
5.4 Combination Strain-Gage Dissection and X-Ray Techniques	31
5.5 References	31
SECTION 6 - Control of Instrumental Factors	32
6.1 Alignment	32
6.1.1 Alignment Terminology and General Requirements	32
6.1.2 Alignment of Optics	32
6.1.3 Determination of the Center of Rotation	34
6.1.4 Alignment of Radial Slide	35
6.1.5 Determination of True Zero	35
6.2 Selection of Slit Size and Collimation	36
6.3 Required Corrections to Raw Diffractometer Intensity Data	38
6.3.1 Correction for Factors Dependent on θ and ψ	38
6.3.2 Corrections for Background	39
6.3.3 Corrections for Deviations From True Focusing Conditions	39
6.4 Determination of Elastic Constants	45
6.4.1 The Stress Factor, K	45
