

# Standard Practice for Construction of Dry-Stacked, Surface-Bonded Walls<sup>1</sup>

This standard is issued under the fixed designation C946; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

## 1. Scope

1.1 This practice covers material, workmanship, and construction procedures for applying surface bonded mortar to both sides of dry stacked concrete masonry units. It does not include grout, reinforcing, anchorage, or control joints since their use is essentially the same as conventional concrete masonry construction, unless specifically mentioned in this practice.

NOTE 1—Design and construction procedures for conventional concrete masonry construction are found in Building Code Requirements for Masonry Structures (TMS 402-08/ACI 530-08/ASCE 5-08) and Specification for Masonry Structures (TMS 602-08/ACI 530.1-08/ASCE 6-08).

1.2 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

## 2. Referenced Documents

### 2.1 ASTM Standards:<sup>2</sup>

- C55 Specification for Concrete Building Brick
- C90 Specification for Loadbearing Concrete Masonry Units
- C129 Specification for Nonloadbearing Concrete Masonry Units
- C270 Specification for Mortar for Unit Masonry
- C887 Specification for Packaged, Dry, Combined Materials for Surface Bonding Mortar

<sup>1</sup> This practice is under the jurisdiction of ASTM Committee C12 on Mortars and Grouts for Unit Masonry and is the direct responsibility of Subcommittee C12.06 on Surface Bonding.

Current edition approved Jan. 1, 2010. Published February 2010. Originally approved in 1981. Last previous edition approved in 2001 as C946 – 91(2001). DOI: 10.1520/C0946-10.

## 3. Storage

3.1 Deliver and store surface bonding mortar in original containers off the ground to prevent contact with water. Protect from rain with suitable covering.

3.2 Store concrete masonry units off the ground to prevent contamination by mud, dust, and materials likely to cause staining or other defects, and protect from rain.

## 4. Materials and Manufacture

4.1 Concrete masonry units shall be clean and shall meet the requirements of either Specifications C55, C90, or C129. The surface to receive surface bonding mortar shall be free of paint, oil, efflorescence, or foreign materials that interfere with bonding.

4.2 Surface bonding mortar shall meet the requirements of Specification C887. If the dry mix contains hard lumps, it shall not be used.

4.3 Leveling course shall be bedded with a mortar meeting either Specification C270 or Specification C887.

4.4 Shims shall be corrosion-resistant metal or plastic with a minimum compressive strength of 2000 psi (13.8 MPa), or steel protected from corrosion by a coating of zinc at least 0.8 oz/ft<sup>2</sup> (2.4 gm/mm<sup>2</sup>), or by a coating of cadmium or zinc of equivalent corrosion resistance.
