

Standard Practice for Evaluating High-Density Rigid Cellular Plastics¹

This standard is issued under the fixed designation D3748; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This practice covers the basic test procedures for determination of the physical properties and reporting of data for high-density rigid cellular plastics.

1.2 The values stated in SI units are to be regarded as standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

NOTE 1—This standard and ISO 9054 address the same subject matter, but differ in technical content.

[D790 Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials](#)

[D883 Terminology Relating to Plastics](#)

[D1622 Test Method for Apparent Density of Rigid Cellular Plastics](#)

3. Terminology

3.1 Definitions:

3.1.1 *high density*—greater than 320 kg/m^3 (0.32 g/cm^3) or 20 lb/ft^3 apparent density.

3.1.2 For definitions of other terms used in this practice, refer to Terminology [D883](#).

4. Significance and Use

4.1 This practice provides appropriate testing methods, and a specific data reporting procedure for high-density rigid cellular plastics.

5. Sample Preparation

5.1 Prepare samples in one of two ways:

(a) process samples directly into proper size specimens, or

(b) prepare samples from larger sections as specified in each individual test.

5.2 Report the precise manner of sample preparation.

6. Conditioning

6.1 Condition specimens prior to testing in accordance with Procedure A of Practice [D618](#).

7. Number of Test Specimens

7.1 Cellular plastics are often nonuniform in density distribution; therefore, a minimum of five specimens needs to be tested per testing method to obtain representative values.

8. Test Methods

8.1 Where technically suitable, reference is made to existing ASTM test methods. Otherwise, comments or changes are outlined in accordance with this practice.

8.2 *Apparent Density*—Test Method [D1622](#).

8.3 *Compressive Strength*—Test Method [D695](#).

8.4 *Tensile Properties*—Test Method [D638](#).

*A Summary of Changes section appears at the end of this standard
