

Designation: D7655/D7655M – 12 (Reapproved 2017)

Standard Classification for Size of Aggregate Used as Ballast for Membrane Roof Systems¹

This standard is issued under the fixed designation D7655/D7655M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This classification defines the aggregate size designations and ranges in mechanical analyses for standard sizes of aggregate used as ballast for membrane roof systems.

1.2 The text of this classification references notes and footnotes which provide explanatory material. These notes and footnotes (excluding those in tables and figures) shall not be considered as requirements of the standard.

1.3 With regard to sieve sizes and the size of aggregate as determined by the use of testing sieves, the values in inch-pound units are shown for the convenience of the user; however, the standard sieve designations shown in parentheses is the standard value as stated in Specification E11.

1.4 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

1.5 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.6 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

¹ This classification is under the jurisdiction of ASTM Committee D08 on Roofing and Waterproofing and is the direct responsibility of Subcommittee D08.20 on Roofing Membrane Systems.

Current edition approved Nov. 1, 2017. Published December 2017. Originally approved in 2012. Last previous edition approved in 2012 as D7655/D7655M – 12. DOI:10.1520/D7655_D7655M-12R17.

2. Referenced Documents

2.1 *ASTM Standards:*²

C136/C136M Test Method for Sieve Analysis of Fine and Coarse Aggregates

D75/D75M Practice for Sampling Aggregates

D1079 Terminology Relating to Roofing and Waterproofing

E11 Specification for Woven Wire Test Sieve Cloth and Test Sieves

2.2 *ANSI/SPRI Standard:*³

RP-4 Wind Design Standard for Ballasted Single-ply Roofing Systems

3. Terminology

3.1 *Definitions*—For definitions of terms used in this specification, refer to Terminology D1079.

4. Significance and Use

4.1 The wind resistance of ballasted membrane roof systems is determined largely by the size and weight of the ballasted used. ANSI/SPRI RP-4 provides a method for the wind design of ballasted single-ply membrane roof systems and includes specific guidelines for the size and weight of aggregate used as ballast. The aggregate size classifications provided in this standard are intended for use with the guidelines provided ANSI/SPRI RP-4 in designing the wind resistance of aggregate ballasted single-ply membrane roof systems.

4.2 The aggregate size classifications provided in this classification are intended to provide a basis of compliance for contract documents³ that specify certain aggregate sizes for use on ballasted membrane systems.
