

Standard Radiographic Examination for Soundness of Welds in Steel by Comparison to Graded ASTM E390 Reference Radiographs¹

This standard is issued under the fixed designation E1955; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This standard covers requirements for radiographic examination for soundness of welds in fabricated steel by comparison to selected severity levels of Reference Radiographs E390, Vol II. The base material varies from greater than 0.25 to 3 in. (6.4–76 mm) inclusive in thickness. Volume II is applicable. This standard is not suitable for shipyard use.

NOTE 1—This standard was adopted to replace Mil-Std. 1264-B entitled “Radiographic Inspection For Soundness of Welds In Steel By Comparison To Graded ASTM E390 Reference Radiographs,” dated 18 January, 1989. This standard is intended to be used for the same applications as the document which it replaced. Users should carefully review its requirements when considering the standard’s use for new and/or different applications.

1.2 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

3. Terminology

3.1 *Definitions*—For definitions of terms used in this document, see Terminology E1316.

3.2 Definitions of Terms Specific to This Standard:

3.2.1 *grades*—welds shall be designated Grades I, II, III, or IV as shown in Table 1. A Grade I weld would contain the least or smallest discontinuities, or both, and a Grade IV weld would contain the largest or most numerous discontinuities, or both.

3.2.2 *examination lot*—an examination lot shall consist of all welds of a specific design and size produced at one facility by the same personnel and production technique, and submitted for examination at one time.

¹ This standard is under the jurisdiction of ASTM Committee E07 on Nondestructive Testing and is the direct responsibility of Subcommittee E07.02 on Reference Radiological Images.

Current edition approved Oct. 1, 2014. Published November 2014. Originally approved in 1998. Last previous edition approved in 2009 as E1955 - 04(2009). DOI: 10.1520/E1955-04R14.
