Connections for High Voltage On-Board Vehicle Electrical Wiring Harnesses -
Test Methods and General Performance Requirements

RATIONALE

The technical committee has determined that the using community is moving towards newer technology and would like to alert users that this newer technology exists which may want to be considered for new design.

The applicable specification is SAE/USCAR-37, "High Voltage Connector Performance Supplement to SAE/USCAR-2."

STABILIZED NOTICE

This document has been declared "STABILIZED" by SAE Connector Systems Standards Committee and will no longer be subjected to periodic reviews for currency. Users are responsible for verifying references and continued suitability of technical requirements. Newer technology may exist.

SAE Executive Standards Committee Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be revised, reaffirmed, stabilized, or cancelled. SAE invites your written comments and suggestions.
