## PREFACE

This Handbook was prepared by the Joint Standards Australia/Standards New Zealand Committee EV/3, Environmental Labelling.

This Handbook is identical to and has been reproduced from ISO/TR 14025:2000, *Environmental labels and declarations—Type III environmental declarations*.

The objective of this Handbook is to provide persons who have an interest in Type III environmental declarations with information about issues and elements pertaining to Type III environmental declarations. At the time that the ISO technical report was developed the subject of Type III environmental declarations was still evolving and there was insufficient agreement on a number of points to support the development of an International Standard. ISO/TR 14025 was thus developed to report on those elements where there was international agreement and to provide information about various approaches currently being considered for those elements where international agreement had yet to be reached.

As this Handbook is reproduced from an International Technical Report, the following applies:

- (a) Its number appears on the cover and title page while the International Technical Report number appears only on the cover.
- (b) In the source text, 'this Technical Report' should read 'this Standards Australia/Standards New Zealand Handbook'.
- (c) A full point substitutes for a comma when referring to a decimal marker.

At the time that this Handbook was published ISO 14021, ISO 14040 and ISO 14041 (mentioned in the Normative references clause) had been adopted as Australian/New Zealand Standards. In the case of ISO 14021, the Australian/New Zealand Standard includes some modifications from the International Standard but these modifications are not expected to affect the way the document is referenced in this Handbook.
