Designation: A1004/A1004M - 99 (Reapproved 2018)

Standard Practice for Establishing Conformance to the Minimum Expected Corrosion Characteristics of Metallic, Painted-Metallic, and Nonmetallic-Coated Steel Sheet Intended for Use as Cold Formed Framing Members¹

This standard is issued under the fixed designation A1004/A1004M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

- 1.1 This practice covers procedures for establishing the acceptability of metallic-coated steel sheet, painted metallic-coated steel sheet, and painted nonmetallic-coated steel sheet for use as cold formed framing members.
- 1.2 This practice shall be used to assess the corrosion resistance of different coatings on steel sheet in a laboratory test. It shall not be used as an application performance standard for the cold formed framing members.
- 1.3 The practice shall be used to evaluate coatings under consideration for addition to Specification A1003/A1003M.
- 1.4 The values stated in either inch-pound or SI units are to be regarded separately as standard. Within the text, the SI units are shown in brackets. The values stated in each system are not exact equivalents; therefore, each system must be used independently of the other.
- 1.5 The text of this standard references notes and footnotes that provide explanatory material. These notes and footnotes, excluding those in tables and figures, shall not be considered as requirements of the standard.
- 1.6 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.
- 1.7 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

Current edition approved Nov. 1, 2018. Published December 2018. Originally approved in 1999. Last previous edition approved in 2014 as A1004/A1004M - 99(2014). DOI: 10.1520/A1004_A1004M-99R18.

A902 Terminology Relating to Metallic Coated Steel Products

A1003/A1003M Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members

B117 Practice for Operating Salt Spray (Fog) Apparatus
D714 Test Method for Evaluating Degree of Blistering of
Paints

D1654 Test Method for Evaluation of Painted or Coated Specimens Subjected to Corrosive Environments

3. Terminology

- 3.1 For definitions of terms related to metallic-coated steel products, see Terminology A902.
 - 3.2 Definitions of Terms Specific to This Standard:
- 3.2.1 *red rust, n*—the oxide formed when iron combines chemically with oxygen.
- 3.2.2 *red rust stains, n*—the discoloration of the surface of a coated steel sheet caused by the bleeding of red rust from adjacent areas.

4. Summary of Practice

- 4.1 This practice involves exposing flat and formed samples of metallic-coated, painted metallic-coated, and painted nonmetallic-coated steel sheet to a controlled saline environment using Practice B117 and measuring the extent of corrosion after a predetermined time of exposure in the accelerated test.
- 4.2 The samples exposed to the saline environment are prepared according to Test Method D1654.
- 4.3 The maximum acceptable amount of corrosion allowed for each material is described in Specification A1003/A1003M.

¹ This practice is under the jurisdiction of ASTM Committee A05 on Metallic-Coated Iron and Steel Products and is the direct responsibility of Subcommittee A05.11 on Sheet Specifications.
