

Designation: B779 – 18

# Standard Specification for Shaped Wire Compact Concentric-Lay-Stranded Aluminum Conductors, Steel-Reinforced (ACSR/TW)<sup>1</sup>

This standard is issued under the fixed designation B779; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

## 1. Scope

1.1 This specification covers shaped wire compact concentric-lay-stranded aluminum conductor, steel-reinforced (ACSR/TW) and its component wires for use as overhead electrical conductors (Explanatory [Note 1](#) and [Note 2](#)).

1.2 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

NOTE 1—ACSR/TW is designed to increase the aluminum area for a given diameter of conductor by the use of trapezoidally shaped wires (TW). The conductors consist of a central core of round steel wire(s) surrounded by two or more layers of trapezoidal aluminum 1350-H19 wires. Different strandings of the same size of conductor are identified by type, which is the approximate ratio of steel area to aluminum area expressed in percent ([Table 1](#), [Table 2](#) and [Table 3](#)). For the purpose of this specification, the sizes listed in [Table 1](#) and [Table 2](#) are tabulated on the basis of the finished conductor having an area or outside diameter equal to that of specific sizes of standard ACSR so as to facilitate conductor selection.

NOTE 2—The aluminum and temper designations conform to ANSI Standard H 35.1. Aluminum 1350 corresponds to Unified Numbering System (UNS) A91350 in accordance with Practice [E527](#).

1.3 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

<sup>A</sup> Code words shown in this column are obtained from Specification B1006. They are provided for information only.

<sup>B</sup> Mass per unit length is based on Class A zinc-coated steel. To convert to kg/km, multiply the lb/1000 ft value x 1.4887.

<sup>C</sup> Rated strengths were calculated in accordance with 9.1 using steel stresses at 1 % for Class A coating in accordance with Specification B498/B498M (1 kip = 1000 lbf = 4.448 kN).

<sup>D</sup> To convert from kcml to mm<sup>2</sup> area, multiply the inch value x 25.4.

<sup>E</sup> To convert from kcml to mm, multiply the inch value x 25.4.

<sup>F</sup> For 795 kcml Type 10 (Puffin ACSR TW) conductor the indicated 0.1108 in. steel wire size does not correspond with the concentric round wire 795 kcml 22/7 Puffin ACSR conductor. The round wire construction utilizes a 0.1056" diameter steel core wire. The industry accepted dimension for the Puffin ACSR TW steel wire is 0.1108 in. Technically this renders the construction as a Type 11 conductor. The conductor mass, rated strength and diameter values correspond to the 0.1108 in. diameter steel core.

**TABLE 2 Construction Requirements for Shaped Wire Compact Concentric-Lay-Stranded Aluminum Conductors, Coated Steel Reinforced Sized to Have Diameter Equal to ACSR, Class AA**

| Code Word <sup>A</sup> | ACSR/TW Conductor Size |      | Size and Stranding of ACSR with Equal Diameter |           | Number of Aluminum Wires | Number of Layers | Steel Core Stranding |                            | Mass per Unit Length, <sup>C</sup> lb/1000 ft | Rated Strength, 1000 lb <sup>D</sup> | Nominal Outside Diameter, in. <sup>E</sup> |

<sup>A</sup> Code words shown in this column are obtained from Specification B1006. They are provided for information only.

<sup>B</sup> To convert from kcmil to mm<sup>2</sup> area, multiply the kcmil value x 5.067 x 10<sup>-4</sup>.

<sup>C</sup> Mass per unit length is based on Class A zinc-coated steel. To convert to kg/km, multiply the lb/1000 ft value x 1.4887.

<sup>D</sup> Rated strength was calculated in accordance with 9.1 using steel stresses at 1 % for Class A coating in accordance with Specification B498/B498M (1 kip = 1000 lbf = 4.445 kN).

<sup>E</sup> To convert the diameter (inches) to mm, multiply the inch value x 25.4.
