

## Designation: F1783 – 97 (Reapproved 2021)

# Standard Guide for Performance of an Ice Rescuer—Level II<sup>1</sup>

This standard is issued under the fixed designation F1783; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

*This standard has been approved for use by agencies of the U.S. Department of Defense.*

## 1. Scope

1.1 This guide covers minimum requirements for the scope of performance of an ice rescuer who performs cold water and ice rescues from the surface, assists with support for ice rescue divers, and provides initial patient care at a cold water or ice rescue incident.

1.2 This guide is one of a series that, together with Guide F1739, describes the minimum performance requirements of an ice rescuer.

1.3 Individuals who will operate in the cold water or ice rescue setting need to be aware of the equipment and physical requirements necessary to be able to perform all identified objectives and necessary skills in the setting.

1.4 The values stated in both inch-pound and SI units are to be regarded separately as the standard. The values given in parentheses are for information only.

1.5 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.6 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

## 2. Referenced Documents

### 2.1 ASTM Standards:<sup>2</sup>

F1739 Guide for Performance of a Water Rescuer—Level I

<sup>1</sup> This guide is under the jurisdiction of ASTM Committee F32 on Search and Rescue and is the direct responsibility of Subcommittee F32.03 on Personnel, Training and Education.

Current edition approved Nov. 15, 2021. Published November 2021. Originally approved in 1997. Last previous edition approved in 2013 as F1783 – 97 (2013). DOI: 10.1520/F1783-97R21.

## 3. Terminology

### 3.1 Definitions of Terms Specific to This Standard:

3.1.1 *drysuit*, *n*—a protective suit that encompasses the wearer, prohibiting water from entering. A drysuit may provide no buoyancy or thermal protection without insulation undergarments or a buoyancy compensating device.

3.1.2 *floating tether, tag line*, *n*—a water rescue technique which stretches a line across a body of water. This line has a flotation device attached to it to keep the rope on the surface of the water and to provide a buoyant object for the victim to grab hold.

3.1.3 *ice awls*, *n*—a device used for rescue on ice consisting of a sharp spike with a handle.

3.1.4 *ice staff*, *n*—a stick, pole, or rod with a sharp spike in one end used to traverse on ice or rescue on ice.

3.1.5 *immersion suit*, *n*—designed to provide cold water protection and buoyancy by one person in cold water emergencies. These devices should conform to standards set by the appropriate national regulatory authority, that is, the U.S. Coast Guard in the United States.

3.1.6 *personal flotation device, PFD*, *n*—a buoyant device suitable for use by one person in water emergencies. These devices should conform to standards set by the appropriate national regulatory authority, that is, the U.S. Coast Guard in the United States.

3.1.7 *sinking tether, snag line*, *n*—a water rescue technique that stretches a weighted line across a body of water to snag or support fully or partly submerged objects and people.

3.1.8 *vessel*, *n*—includes every description of watercraft, including nondisplacement craft and seaplanes, used or capable of being used as a means of transportation on water.

## 4. Significance and Use

4.1 This guide is to be used to expand the performance of water rescuers and improve the emergency response and patient care delivered to victims in the cold water and ice rescue environment.

4.2 All persons who are identified as ice rescuers shall meet the requirements of this guide.
