**Soils for civil
engineering
purposes —**

Part 9: In-situ tests

ICS 93.020

Committees responsible for this British Standard

The preparation of this British Standard was entrusted by the Road Engineering Standards Policy committee (RDB/-) to Technical committee RDB/38, upon which the following bodies were represented:

Association of consulting Engineers
 British Civil Engineering Test Equipment Manufacturers' Association
 County Surveyors' Society
 Department of the Environment (Property Services Agency)
 Department of the Environment (Building Research Establishment)
 Department of Transport
 Department of Transport (Transport and Road Research Laboratory)
 Co-opted members

This British Standard, having been prepared under the direction of the Road Engineering Standards Policy Committee, was published under the authority of the Board of the BSI and comes into effect on 31 August 1990

Committees responsible	Inside front cover
Foreword	iii
<hr/>	
1 Scope	1
2 In-situ density tests	1
2.0 Introduction	1
2.1 Sand replacement method suitable for fine- and medium-grained soils (small pouring cylinder method)	1
2.2 Sand replacement method suitable for fine-, medium- and coarse-grained soils (large pouring cylinder method)	3
2.3 Water replacement method suitable for coarse-grained soils	6
2.4 Core cutter method for cohesive soils free from coarse-grained material	9
2.5 Nuclear methods suitable for fine-, medium- and coarse-grained soils	10
3 In-situ penetration tests	18
3.0 Introduction	18
3.1 Determination of the penetration resistance using the fixed 60° cone and friction sleeve (static cone penetration test CPT)	18
3.2 Determination of the dynamic probing resistance using the 90° cone (dynamic probing DP)	22
3.3 Determination of the penetration resistance using the split-barrel sampler (the standard penetration test SPT)	23
4 In-situ vertical deformation and strength tests	23
4.0 Introduction	23
4.1 Determination of the vertical deformation and strength characteristics of soil by the plate loading test	23
4.2 Determination of the settlement characteristics of soil for lightly loaded foundations by the shallow pad maintained load test	27
4.3 Determination of the in-situ California Bearing Ratio (CBR)	29
4.4 Determination of the in-situ vane shear strength of weak intact cohesive soils	32
5 In-situ corrosivity tests	34
5.0 Introduction	34
5.1 Determination in-situ of the apparent resistivity of soil	34
5.2 Determination in-situ of the redox potential of soil	35
<hr/>	
Appendix A Typical test data and calculation forms	55
