

Laboratory furniture and fittings —

Part 2: Specification for performance

Committees responsible for this British Standard

The preparation of this British Standard was entrusted by the Laboratory Apparatus Standards Policy Committee (LBC/-) to Technical Committee LBC/18, upon which the following bodies were represented:

Association for Science Education
 Association of the British Pharmaceutical Industry
 British Furniture Manufacturers' Federation
 British Laboratory Ware Association
 British Occupational Hygiene Society
 British Woodworking Federation
 CLEAPSS
 Chartered Institution of Building Services Engineers
 Chartered Society of Designers
 Chemical Industries Association
 Department of Education and Science
 Department of Health
 Department of the Environment (Property Services Agency)
 Department of Trade and Industry (Laboratory of the Government Chemist)
 Furniture Industry Research Association
 GAMBICA (BEAMA Ltd.)
 Health and Safety Executive
 Institute of Medical Laboratory Sciences
 Manufacturing, Science and Finance Union
 Medical Research Council
 National Association of Teachers in Further and Higher Education
 Royal Institute of British Architects
 Royal Society of Chemistry
 Universities Safety Association
 University Grants Committee

This British Standard, having been prepared under the direction of the Laboratory Apparatus Standards Policy Committee, was published under the authority of the Standards Board and comes into effect on 31 May 1991

 Committee reference LBC/18
 Draft for comment 90/55171 DC

Amendments issued since publication

Amd. No.	Date	Comments
13430 Corrigendum No. 1	8 April 2002	Indicated by a sideline

Contents

	Page
Committees responsible	Inside front cover
Foreword	iii
1 Scope	1
2 Definitions	1
3 Performance grades	1
4 Performance	2
5 Strength and stability	2
6 Surface finishes	2
7 Test samples	3
8 Test report	7
9 Marking	7
Appendix A Method of test for the assessment of support system strength	8
Appendix B Method of test for surface penetration and the assessment of tool blunting propensity	8
Appendix C Method of test for impact	14
Appendix D Method of test for the assessment of surface resistance to wet and dry heat	16
Appendix E Method of test for the assessment of surface resistance to cold liquids	21
Appendix F Method of test for the assessment of resistance to surface wear of applied finishes	24
Appendix G Method of test for assessment of adhesion of paints and lacquers to substrates (cross cut test)	27
Appendix H Method of test for the assessment of resistance to surface heating	31
Appendix J Method of test for the assessment of peel strength	32
Appendix K Method of test for the assessment of shrinkage resistance	34
Appendix L Method of test for the assessment of bond quality	34
Appendix M Method of test for the assessment of the adhesion of edging material to substrate	36
Appendix N Method of test for the determination of resistance to humidity under condensation conditions induced by cyclic temperature changes between 42 °C and 48 °C	37
Appendix P Method of test for water ingress	38
Appendix Q Method of test for assessing the effects of flooding	39
Appendix R Method of assessment of ease of worktop and work surface renovation	39
Appendix S Method of test for impact by large ball for assessment of accidental instrument damage propensity	40
Appendix T Manufacturing tolerances on dimensions and tolerances on furniture assembly	43
Figure 1 — Typical support system test assembly arrangement	9
Figure 2 — Typical layout of surface penetration (tool blunting propensity) test machine	12
Figure 3 — Details of scraper blade (surface penetration test)	13
Figure 4 — Details of scraper blade holder (surface penetration test)	13
Figure 5 — Details of scraper blade clamp (surface penetration test)	14
Figure 6 — Electrically-heated stainless steel block (wet and dry heat tests)	18
