

Mortar — Methods of test for mortar and screed — Chemical analysis and physical testing

ICS 91.100.10

Committees responsible for this British Standard

The preparation of this British Standard was entrusted to Subcommittee B/519/2, Mortar, upon which the following bodies were represented:

Autoclaved Aerated Concrete Products Association

Brick Development Association

British Cement Association

British Lime Association

CERAM

Cementitious Slag Makers Association

Civil Testing Machine Manufacturers' Association

Department of the Environment (Building Research Establishment)

Federation of Plastering and Drywall Contractors

Institute of Concrete Technology

Institution of Structural Engineers

National House-Building Council

National Specialist Contractors Council

Quarry Products Association

United Kingdom Quality Ash Association

Vermiculite Association

Co-opted members

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 22 August 2005

Amendments/corrigenda issued since publication

Amd. No.	Date	Comments
A1	31 January 2010	See Foreword
A2	31 May 2013	See Foreword
C1	31 May 2013	Corrigendum to remove mark up instructions in subclause 9.4.4
C2	30 June 2014	Corrigendum to update the front cover and amendments table

Contents

	Page
Committees responsible	Inside front cover
Foreword	ii
<hr/>	
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and designations	2
5 Sampling	3
6 Physical tests	5
7 Chemical analysis	8
8 Reports for chemical analysis	20
9 Calculation of mix proportions and interpretation of results	21
<hr/>	
Annex A (informative) Information relevant to the calculations of mix proportions of hardened mortars, screeds and plasters	30
Annex B (informative) Estimates of precision in the analysis of hardened mortars/screeds	31
<hr/>	
Bibliography	37
<hr/>	
Figure 1 — Diagrammatic representation of ball release	6
Figure 2 — Suitable device for measuring penetration	7
<hr/>	
Table 1 — Representative sample sizes	4
Table 2 — Available lime contents of nominal volume mixes	22
Table 3 — Equations for the calculation of composition of freshly mixed or hardened mortars, screeds, plasters and renders	24
Table 4 — Composition of types of mortars, plasters and renders: Cement: fine aggregate (sand) mortars and plasters (including air entrained)	25
Table 5 — Composition of types of screeds: Cement: fine aggregate (sand) screeds	25
Table 6 — Composition of types of mortars, plasters and renders: Masonry cement: fine aggregate (sand) mortars and plasters	25
Table 7 — Composition of types of mortars, plasters and renders: Cement: lime: fine aggregate (sand) mortars and plasters	25
Table 8 — Composition of types of mortars, plasters and renders: Gypsum: lime: fine aggregate (sand) plaster	26
Table 9 — Dry bulk densities of material constituents	26
Table 10 — Standard values for hardened mortars, screeds and plasters	28
Table B.1 — Precision estimates for cement content expressed as a percentage of the mass of dry ingredients (fine aggregate (sand) corrections applied)	31
Table B.2 — Precision estimates for hydrated lime content expressed as a percentage mass of dry ingredients (fine aggregate (sand) corrections applied)	31
Table B.3 — Precision data: analysis for percentage cement by mass — Control samples of fine aggregate (sand)s used	34
Table B.4 — Precision data: analysis for percentage lime by mass — Control samples of fine aggregate (sand)s used	34
Table B.5 — Precision data: fine aggregate (sand) volume proportions to one volume of cement	35
Table B.6 — Precision data: lime volume proportions to one volume of cement	35
Table B.7 — Numbers of outliers and stragglers found in the precision experiment	36
