

Assessment of inadvertent initiation of bridge wire electro-explosive devices by radio-frequency radiation — Guide

ICS 13.280

Committees responsible for this British Standard

The preparation of this British Standard was entrusted to Technical Committee GEL/602, upon which the following bodies were represented:

BBC — British Broadcasting Corporation
 BEAMA Ltd. — GAMBICA
 Chamber of Shipping
 Engineering Equipment and Materials Users Association
 ERA Technology Ltd
 HSE — Health and Safety Executive
 Institute of Petroleum
 Institution of Gas Engineers
 Ministry of Defence — UK Defence Standardization
 Radio Society of Great Britain
 SIRA Limited
 UK Offshore Operators Association Limited
 Co-opted member

This British Standard, having been prepared under the direction of the Electrotechnical Sector Policy and Strategy Committee, was published under the authority of the Standards Policy and Strategy Committee on 30 October 2002

© BSI 30 June 2003

First published February 1986
 First revision November 1991
 Second revision October 2002

The following BSI references relate to the work on this British Standard:
 Committee reference GEL/602

Amendments issued since publication

Date	Amd No.	Comments
14499 Corrigendum No. 1	30 June 2003	Changes to Figure 15

Contents

Committees responsible	Inside front cover
Foreword	iii
<hr/>	
Introduction	1
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and abbreviations	3
5 General considerations	4
6 Transmitters and transmitter output parameters	5
7 Circuits for blasting and well perforation	7
8 Electro-explosive devices	13
9 Methods of assessment for determining potential RF ignition hazards on a site where EED are used	15
10 Practical on-site testing	61
11 Safety procedures	62
12 Special applications	62
<hr/>	
Annex A (informative) Extraction of energy from the electromagnetic field	64
Annex B (informative) Measurement of electromagnetic fields	64
Annex C (informative) Sources of information and addresses of advisory bodies	67
Annex D (informative) Electromagnetic radiated fields and examples of radiating antennas and unintended receiving antenna characteristics	69
Annex E (informative) The effective resistance of the leading wires of an EED	76
Annex F (informative) Derivation of minimum distances of safe approach for Table 2 and Table 3	80
Annex G (informative) Ground-wave propagation (vertical polarization): calculation of field strength	81
Annex H (informative) Worked examples to demonstrate the effects of antenna gain	83
Annex I (informative) The effects of leading wire resistance, safety resistors and the use of EED with different characteristics	83
Annex J (informative) Derivation of Figure 12a) to Figure 12g) for EED alone incorporating the resistance of leading wires and safety resistances	85
<hr/>
