Crude sodium borates for industrial use — Determination of total and alkali-soluble silica contents — Molybdosilicate spectrometric method

Borates de sodium bruts à usage industriel — Dosage de la silice totale et soluble en milieu alcalin — Méthode spectrométrique au molybdosilicate

First edition - 1984-06-15

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 5935 was developed by Technical Committee ISO/TC 47, Chemistry, and was circulated to the member bodies in January 1983.

It has been approved by the member bodies of the following countries:

Austria

Hungary

Portugal

Belgium China

India Italy

South Africa, Rep. of

Czechoslovakia

New Zealand

Switzerland United Kingdom

France

Nigeria

USSR

Germany, F.R.

Poland

The member body of the following country expressed disapproval of the document on technical grounds:

Australia

This International Standard has also been approved by the International Union of Pure and Applied Chemistry (IUPAC).
