Chromium ores — Determination of phosphorus content — Reduced molybdophosphate photometric method

Minerais de chrome — Dosage du phosphore — Méthode photométrique au molybdophosphate réduit

First edition — 1981-03-15

UDC 553.461 : 543.42 : 546.18

Ref. No. ISO 6127-1981 (E)

Descriptors : chromate minerals, chemical analysis, determination of content, phosphorus, spectrophotometric analysis.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 6127 was developed by Technical Committee ISO/TC 65, *Manganese and chromium ores*, and was circulated to the member bodies in January 1980.

It has been approved by the member bodies of the following countries :

Australia	France	Poland
Austria	Hungary	Romania
Bulgaria	India	South Africa, Rep of
China	Italy	United Kingdom
Czechoslovakia	Japan	USSR
Egypt, Arab Rep. of	Korea, Dem. P. Rep. of	

No member body expressed disapproval of the document.
