INTERNATIONAL STANDARD

First edition 1999-12-01

Preparation of steel substrates before application of paints and related products — Tests for the assessment of surface cleanliness —

Part 10:

Field method for the titrimetric determination of water-soluble chloride

Préparation des subjectiles d'acier avant application de peintures et de produits assimilés — Essais pour apprécier la propreté d'une surface —

Partie 10: Méthode in situ pour la détermination titrimétrique du chlorure hydrosoluble

Contents

1 Scope	1
2 Normative references	1
3 Principle	1
4 Reactions	2
5 Reagents and materials	2
6 Removal of water-soluble contaminants from the steel surface	2
7 Determination by drop titration	3
8 Expression of results	3
9 Precision	4
10 Test report	4

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8502-10 was prepared by Technical Committee ISO/TC35, *Paints and varnishes,* Subcommittee SC 12, *Preparation of steel substrates before the application of paints and related products.*

ISO 8502 consists of the following parts, under the general title *Preparation of steel substrates before the application of paints and related products* — *Tests for the assessment of surface cleanliness*:

- Part 1: Field test for soluble iron corrosion products [Technical Report]
- Part 2: Laboratory determination of chloride on cleaned surfaces
- Part 3: Assessment of dust on steel surfaces prepared for painting (pressure-sensitive tape method)
- Part 4: Guidance on the estimation of the probability of condensation prior to paint application
- Part 5: Measurement of chloride on steel surfaces prepared for painting (ion detection tube method)
- Part 6: Extraction of soluble contaminants for analysis The Bresle method
- Part 7: Field method for the determination of oil and grease
- Part 8: Field method for the refractometric determination of moisture
- Part 9: Field method for the conductometric determination of water-soluble salts
- Part 10: Field method for the titrimetric determination of water-soluble chloride
- Part 11: Field method for the turbidimetric determination of water-soluble sulfate
- Part 12: Field method for the titrimetric determination of water-soluble ferrous ions
- Part 13: Field method for the determination of soluble salts by conductometric measurement

At the time of publication of this part of ISO 8502, parts 7, 8, 11, 12 and 13 were in course of preparation.
