**Solar energy — Calibration of field pyranometers
by comparison to a reference pyranometer**

*Énergie solaire — Étalonnage des pyranomètres de terrain par
comparaison à un pyranomètre de référence*

Reference number
ISO 9847:1992(E)

Contents

	Page
1 Scope	1
2 Normative references	1
3 Definitions	1
4 Apparatus	2
5 Calibration procedure	3
6 Certificate of calibration	7
7 Precision and accuracy	7

Annexes

A Calibration devices using artificial sources	8
B Interferences and precautions	11
C Computation of daily average solar angle	13
D Procedure to determine the ratio of the directional response	14
E Bibliography	15

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9847 was prepared by Technical Committee ISO/TC 180, *Solar energy*, Sub-Committee SC 1, *Climate – Measurement and data*.

Annexes A, B, C, D and E of this International Standard are for information only.
