Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 13450 was prepared by Technical Committee ISO/TC 42, *Photography*.

This first edition of ISO 13450 cancels and replaces ISO 7374:1988, which dealt with dimensions and format of 110-size film and backing paper, ISO 7330:1987, which dealt with location and dimensions of 110-size film exposure and film identification notches, and ISO 7261:1987, which dealt with 110-size cartridge dimensions.

Annexes A, B and C of this International Standard are for information only.
