
**Air quality — Determination of ozone
in ambient air — Ultraviolet photometric
method**

*Qualité de l'air — Dosage de l'ozone dans l'air ambiant — Méthode
photométrique dans l'ultraviolet*

Contents	Page
1 Scope	1
2 Interferences	1
3 Principle	2
4 Reagents and materials	3
5 Apparatus	3
6 Procedure	6
7 Expression of results	8
8 Test report	9
Annex A (informative) Some reported chemical interferents for UV photometric ozone analysers	10
Annex B (informative) Correction for ambient nitric oxide	11
Annex C (informative) Typical performance specifications for a UV photometric ozone analyser	12
Bibliography	13

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 13964 was prepared by Technical Committee ISO/TC 146, *Air quality*, Subcommittee SC 3, *Ambient atmospheres*.

Annexes A, B and C of this International Standard are for information only.
