

Designation: D6182 – 23

# Standard Test Method for Flexibility and Adhesion of Finish on Leather<sup>1</sup>

This standard is issued under the fixed designation D6182; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reappraisal. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reappraisal.

## 1. Scope

1.1 This test method is intended for use on finished leather to evaluate resistance to cracking, delamination, and discoloration of the finish when subjected to repeated flexing. This test method does not apply to wet blue.

1.2 The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.4 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

For *Annual Book of ASTM Standards* volume information, refer to the standard's Document Summary page on the ASTM website.

<sup>3</sup> ISO 32100 is published by the International Organization for Standardization and is available from ANSI, 11 W. 42nd St., 13th Floor, New York, NY 10036, and from Global Engineering Documents, 15 Inverness Way East, Englewood, CO 80112.

## 3. Terminology

3.1 *Definitions*—Terms used in this test method are defined in accordance with Terminology [D1517](#).

## 4. Summary of Test Method

4.1 Leather is conditioned according to one of two prescribed procedures, flexed in a Bally Flexometer,<sup>4</sup> and an endpoint is determined by rating the degree of damage after a fixed number of flexes.

## 5. Significance and Use

5.1 This test method is intended for use on any type of finished leather.

5.2 This test method will give an indication of the flexibility, adhesion, and strength of the finish on leather.

## 6. Apparatus

6.1 *Bally Flexometer*, conforming to ISO 32100, and operating at a rate of 100 cycles/min.

6.2 Die for cutting leather specimens to 45 mm by 70 mm.

## 7. Reagents and Materials

7.1 *Distilled or Deionized Water*.

## 8. Sampling, Test Specimens, and Test Units

8.1 Sample leather according to Practice [D2813](#).

8.2 Cut two test pieces 45 mm by 70 mm from each sample using a die, one piece cut parallel and the other perpendicular to the backbone.

## 9. Conditioning

9.1 *Dry Leather Test*—Prepare the test pieces according to Practice [D1610](#).

9.2 *Wet Leather Test*—Submerge the test pieces in distilled or deionized water for 20 min  $\pm$  1 min. Blot excess water off using blotting paper or a paper towel.

<sup>4</sup> Equipment conforming to ISO 32100 is available from Soraco SRL Via Orfanotrofo, 26 13900 Biella, Italy. Other manufacturers are Giuliani S.N.C., Via Cervino, 10 Torino, Italy, and Pellizzato Bruno, 31033 Salvarosa di Castelfranco Veneto (Treviso), Borgo Mandolato 13, Italy and Schap Specialty Machine, Inc. Spring Lake, MI, USA.
