Ref. No. ISO 2325-1986 (E)

Descriptors: cokes, coke, 1986, grain size analysis, sieve analysis.

Price 5.000, on 8 pages

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 2325 was prepared by Technical Committee ISO/TC 27, *Solid mineral fuels*.

This third edition cancels and replaces the second edition (ISO 2325-1979), of which it constitutes a minor revision.

Users should note that all International Standards undergo revision from time to time and that any reference made here to any other International Standard implies its latest edition, unless otherwise stated.
