Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4064-3 was prepared by Technical Committee ISO/TC 30, *Measurement of fluid in closed conduits*, Subcommittee SC 7, *Volume flowrate methods*.

This second edition cancels and replaces the first edition (ISO 4064-3:1983), which has been technically revised.

ISO 4064 consists of the following parts, under the general title *Measurement of water flow in closed conduits — Meters for cold potable water*:

- *Part 1: Specifications*
- *Part 2: Installation requirements*
- *Part 3: Test methods and equipment*

Annex A forms a normative part of this part of ISO 4064.
