**Packaging of uranium hexafluoride (UF₆)
for transport**

Emballage de l'hexafluorure d'uranium (UF₆) en vue de son transport

Reference number
ISO 7195:1993(E)

Contents

	Page
1 Scope	1
2 Definitions	1
3 Transport cylinders	2
4 Protective packaging	5
5 In-service tests	5
6 Shipping requirements	8

Annexes

A Principles for the safe handling of UF ₆	10
B Typical examples of sampling and transport cylinders, valves and packaging	12
C Properties of uranium hexafluoride, its reaction products and associated hazards	38
D Alternative material specifications	40

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7195 was prepared by Technical Committee ISO/TC 85, *Nuclear energy*, Sub-Committee SC 5, *Nuclear fuel technology*.

Annexes A, B, C and D form an integral part of this International Standard.
