Mechanical vibration and shock — Range of idealized values to characterize seated- body biodynamic response under vertical vibration

*Vibrations et chocs mécaniques — Enveloppes de valeurs probables
caractérisant la réponse biodynamique d'individus assis soumis à des
vibrations verticales*

Foreword.....	iv
Introduction	v
1 Scope	1
2 Normative reference	1
3 Terms and definitions	2
4 Driving-point mechanical impedance and apparent mass of the seated body under vertical vibration	3
4.1 Definition of values of driving-point mechanical impedance and apparent mass	3
4.2 Applicability of values of driving-point mechanical impedance and apparent mass.....	3
5 Seat-to-head transmissibility of the seated human body under vertical vibration.....	8
5.1 Definition of values of seat-to-head transmissibility	8
5.2 Applicability of values of seat-to-head transmissibility	8
6 Applications	11
6.1 Model of the seated human body.....	11
6.2 Computation of biodynamic response functions for fixed body masses.....	11
Annex A (informative) Identification of the data used to define the range of idealized driving-point mechanical impedance/apparent mass and seat-to-head transmissibility data.....	12
Annex B (informative) Model.....	15
Annex C (informative) Mathematical expressions for the mean (target) biodynamic response functions	19
Annex D (informative) Model computed values of response functions for fixed body masses	23
Bibliography	27
