## Manganese ores — Determination of carbon dioxide content — Gravimetric method

Minerais de manganèse - Dosage du dioxyde de carbone - Méthode gravimétrique

Second edition - 1981-11-01

UDC 669.74: 543.21: 546.264-31

Ref. No. ISO 314-1981 (E)

ISO 314-198

Descriptors: manganese ores, chemical analysis, determination of content, carbon dioxide, gravimetric analysis.

## **Foreword**

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 314 was developed by Technical Committee ISO/TC 65, Manganese and chromium ores.

This second edition was submitted directly to the ISO Council, in accordance with clause 5.10.1 of part 1 of the Directives for the technical work of ISO. It cancels and replaces the first edition (i.e. ISO 314-1975), which had been approved by the member bodies of the following countries:

Austria Bulgaria Chile Czechoslovakia Finland

France

Ireland Italy Japan Netherlands Poland

Hungary

India

Portugal Romania

South Africa, Rep. of Spain

United Kingdom USSR

Germany, F.R. Poland

No member body had expressed disapproval of the document.
