**Acid-grade and ceramic-grade fluorspar —  
Determination of barium sulfate  
content — Gravimetric method**

*Spaths fluor pour la fabrication de l'acide fluorhydrique et spaths fluor  
utilisables dans l'industrie céramique — Dosage du sulfate de baryum —  
Méthode gravimétrique*

Reference number  
ISO 5437:1992(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 5437 was prepared by Technical Committee ISO/TC 175, *Fluorspar*.

This second edition cancels and replaces the first edition (ISO 5437:1988), which has been updated.
