Ethanol for industrial use — Methods of test — Part 3: Estimation of content of carbonyl compounds present in small amounts — Photometric method

Éthanol à usage industriel — Méthodes d'essai — Partie 3 : Évaluation de la teneur en composés carbonylés présents en faible quantité — Méthode photométrique

First edition - 1981-12-15

UDC 661.722:543.854.6

Ref. No. ISO 1388/3-1981 (E)

Descriptors: industrial products, ethanols, tests, determination, carbonyl compounds, spectrophotometric analysis.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 1388/3 was developed by Technical Committee ISO/TC 47, *Chemistry*, and was circulated to the member bodies in February 1980.

It has been approved by the member bodies of the following countries:

Australia France Poland Austria Germany, F.R. Romania Belgium Hungary South Africa, Rep. of Brazil Italy Switzerland Bulgaria Korea, Rep. of Thailand China Netherlands United Kingdom Czechoslovakia Philippines USSR

No member body expressed disapproval of the document.

International Standards ISO 1388/1 to ISO 1388/12 cancel and replace ISO Recommendation R 1388-1970, of which they constitute a technical revision.
