Rubber compounding ingredients — Sulfenamide accelerators — Test methods

*Ingrédients de mélange du caoutchouc — Accélérateurs du type
sulfénamide — Méthodes d'essai*

Reference number
ISO 11235:1999(E)

Contents	Page
1 Scope	1
2 Normative references	1
3 Determination of physical and chemical properties	2
4 Test methods for purity	3
5 Test method for insoluble material	10
6 Test methods for melting range	12
7 Test method for volatile material	15
8 Test method for wet sieve analysis	16
9 Test method for the determination of ash	17
10 Test report	19
Annex A (normative) Classification and key properties of sulfenamide (class 1) vulcanization accelerators	20

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11235 was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 3, *Raw materials (including latex) for use in the rubber industry*.

Annex A forms an integral part of this International Standard.
