Surface active agents — Detergents — Determination of cationic-active matter content —

Part 1:

High-molecular-mass cationic-active matter

Agents de surface — Détergents — Détermination de la teneur en matière active cationique —

Partie 1: Matière active cationique à haute masse moléculaire

Reference number ISO 2871-1: 1988 (E)

ISO 2871-1: 1988 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 2871-1 was prepared by Technical Committee ISO/TC 91, Surface active agents.

Together with ISO 2871-2, this part of ISO 2871 cancels and replaces the first edition (ISO 2871 : 1973), of which it constitutes a minor revision.

ISO 2871 consists of the following parts, under the general title Surface active agents — Determination of cationic-active matter content:

- Part 1: High-molecular-mass cationic-active matter
- Part 2: Low-molecular-mass cationic-active matter
