ITU-T RECOMMENDATION E.166/X.122

NUMBERING PLAN INTERWORKING FOR THE E.164 AND X.121 NUMBERING PLANS

Summary

This Recommendation defines the procedures applicable for the purpose of numbering plan interworking between networks which use the E.164 numbering plan and networks which use the X.121 numbering plan. The principles for interworking between the E.164 and X.121 numbering plans covered in this Recommendation are illustrated by various examples of packet mode calls. Although both the escape code method and the Numbering Plan Identifier (NPI) method are described, the recommended solution is use of the NPI method.

Source

ITU-T Recommendation E.166/X.122 was revised by ITU-T Study Groups 2 and 7 (1993-1996) and was approved under the WTSC Resolution No. 1 procedure on the 8th of October 1996.

Due to some legibility problems, a new version was output on the 18th of March 1998 with enhanced figures, but without any content or editorial modification.
