ITU-T Recommendation O.133

(Previously "CCITT Recommendation")

FOREWORD

The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of the International Telecommunication Union. The ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Conference (WTSC), which meets every four years, established the topics for study by the ITU-T Study Groups which, in their turn, produce Recommendations on these topics.

ITU-T Recommendation O.133 was revised by the ITU-T Study Group IV (1988-1993) and was approved by the WTSC (Helsinki, March 1-12, 1993).

NOTES

1 As a consequence of a reform process within the International Telecommunication Union (ITU), the CCITT ceased to exist as of 28 February 1993. In its place, the ITU Telecommunication Standardization Sector (ITU-T) was created as of 1 March 1993. Similarly, in this reform process, the CCIR and the IFRB have been replaced by the Radiocommunication Sector.

In order not to delay publication of this Recommendation, no change has been made in the text to references containing the acronyms "CCITT, CCIR or IFRB" or their associated entities such as Plenary Assembly, Secretariat, etc. Future editions of this Recommendation will contain the proper terminology related to the new ITU structure.

2 In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

CONTENTS

	<i>Page</i>
1 Introduction	1
2 General	1
2.1 Measuring functions and physical configuration	1
2.2 Measuring accuracy and compatibility objectives	1
2.3 Measurement capabilities	2
3 Instrument specifications.....	3
3.1 Interfaces	3
3.2 Analogue signal generator	4
3.3 Analogue signal analyzer.....	5
3.4 Digital signal generator.....	5
3.5 Digital signal analyzer	7
4 Measuring accuracy	9
4.1 Definition of the error limits of the measuring instrumentation	9
4.2 Summary of total measuring errors	10
5 Operating environment.....	14
Annex A – Intrinsic errors in the PCM encoding process which may affect the interpretation of measured results	14
A.1 Introduction	14
A.2 Measurement of gain and variation of gain with input level	15
A.3 Quantizing distortion measurements.....	22
A.4 General notes to tables and graphs	26
